

Lukáš Kožušník

22 years old

Profile

I'm a self-taught backend developer with 4+ years of experience in Python, with overlap into AI.

I discovered programming through my passion for logic and mathematics, which naturally led me to explore real-world problem solving through code.

I've built personal projects such as a crypto trading bot using webhook automation with TradingView and a custom backend logic for Bybit integration, as well as a social network API and other small programs. Professionally, I've worked in fast-paced environments using modern backend frameworks like **FastAPI** and **Django**, with practical experience in **LangChain**, **LangGraph**, **SQL**, **Celery**, and **Docker**. I also have hands-on experience with **CI/CD pipelines (GitHub Actions)**, **Python type checking (mypy, Pydantic)**, **code formatting and linting (Black, Ruff)**, and **pre-commit hooks** to ensure clean and maintainable code.

Work Experience
